

GreySellsGlobal Ltd., announce new working relationship promoting International Geomatics ‘MarineGRIDD’ digital mapping portal.

International Geomatics (IG),

The new name in global positioning services has announced a key working relationship to drive forward ambitious growth plans. A key identified differentiator is the enhanced delivery of digital data to clients and as part of these plans, we have teamed up with GreySells Global Ltd., to offer the digital mapping portal product ‘MarineGRIDD’.

MarineGRIDD is a web portal based spatial delivery product which migrates new or existing datasets into a simple user accessed system to deliver digital mapping to the client on hand held devices.

GreySellsGlobal Ltd (GSGL), who specialise in the generation and publication of concise offshore activity maps to the oil, gas and marine service sector, it provides a versatile, flexible, digital delivery portal on handheld devices to his user base. Steve Adams, founder of GreySellsGlobal, comments, “MarineGRIDD provides a flexible approach to partition extensive datasets, delivering the information the client requests, without the previous high-tech interface or specialist knowledge to operate them.

International Geomatics Business Development Officer, Trevor Hughes comments “The management of International Geomatics have known Steve for many years and are pleased that he has been an integral part of the user interface into the product. We shall work closely over the next few months to develop the extensive range of mapping into a fully functional digital map data delivery product”.

Both International Geomatics and GreySellsGlobal as newly formed companies, have proven track records within their respective survey, positioning and mapping capabilities. It is the intention that MarineGRIDD will be developed as the delivery mechanism for digital mapping products covering selected regional offshore activity areas. This will commence with the Northwest Europe region, with coverage of a variety of features including operational offshore fields, installations, licence blocks with operator status, major pipelines, ports and terminals, development well locations, bathymetry and decommissioning facilities.

About International Geomatics

International Geomatics Group represents a fresh, new approach to the DGPS (Differential Global Positioning Services) industry backed by industry-renowned personnel. The company is driven by its “ICE” (Innovation, Communication, Execution) philosophy, coupled with an innovative, streamlined, globally-minded business model with an unstinting focus on cost efficiency.
